BOOK SYNOPSIS

The ultimate, case-based guide for learning and teaching the art of diagnostic reasoning for acute and critical care nurse practitioners. Written by experienced nurse practitioners working in acute and critical care settings, and endorsed by the American Association of Critical-Care Nurses (AACN), *Acute & Critical Care Nurse Practitioner: Cases in Diagnostic Reasoning* presents a wide range of acute and critical care patient cases focusing on diagnosis and management. This authoritative book is designed to help nurse practitioners and students learn how to proceed from a broad differential diagnosis to a specific management plan through expert analysis of patient data. While reconstructing the course of real-life clinical cases, the authors “think out loud” and reveal how they identify pertinent positives and significant negatives to support or refute items on their differential diagnoses list, and further incorporate laboratory and diagnostic testing results to establish a medical diagnosis. Each case includes a description of the management for the identified diagnosis. INCLUDES: · 71 cases based on real-life clinical scenarios · Analysis questions and case discussions to enable learners to actively participate in inductive and deductive reasoning · Cases that can be used to support course work, certification review, and job training. The first of its kind, *Acute & Critical Care Nurse Practitioner: Cases in Diagnostic Reasoning* is an essential learning and teaching resource for students, clinicians, and clinical faculty to master the art of diagnostic reasoning.
